SUMMARY

Software engineer building LLM features on a production backend: Gemini 2.5 Flash chat on Supabase Edge Functions with engineered prompts and context caching, local Qwen 2.5 and Whisper inference in C++, and 3+ years of production C++/.NET, SQL Server and PostgreSQL work at KLA. Develops daily with Claude Code.

SKILLS

AI & LLM: LLM integration (Gemini API, llama.cpp, llama-cpp-python), prompt engineering, Gemini context caching, local inference (Qwen 2.5, TinyLlama, Phi-2), Whisper speech-to-text, classical ML

Languages: Python, TypeScript/JavaScript, C#/.NET, C++, SQL, AL

Backend & Data: REST APIs, integrations, serverless edge functions (Supabase, Deno), authentication (Supabase Auth, Google Sign-In), event-driven apps, React, React Native, PostgreSQL, SQL Server, SQLite

Cloud & DevOps: Azure DevOps, Google Cloud, Docker, Git, CI/CD, automated testing, Agile

AI-assisted engineering: Claude Code, Codex, Antigravity, MCP servers, Graphify, custom agent skills

EXPERIENCE

Vffice

Montreal / Brossard, QC

Back End Developer (Junior Backend Developer, May - Aug 2026 co-op)

May 2026 - Present

- **Secure APIs & integrations:** Designed a secured REST API connecting a production Microsoft Dynamics 365 Business Central ERP to external systems; extended modules for order sync and workflow validation.
- **AI-assisted delivery:** Build with Claude Code, Codex and Antigravity, and run Azure DevOps (Repos, Boards, Pipelines) daily through Microsoft's Azure DevOps MCP server.
- **Ownership & documentation:** Delivered 23 pull requests across 3 repositories, owning code review, testing and release management; piloted Graphify knowledge-graph documentation, which I now use across projects.

KLA Corporation

Chennai, India

Software Engineer

Jul 2021 - Nov 2024

- **Production migration:** Traced about 20% of cost to an MSSQL HA cluster; led a 3-person zero-code migration of 1,200+ queries to multi-node PostgreSQL, cutting cost 25% and adding about \$2M a year from 3 new customers.
- **CI/CD:** Built an automated CI/CD pipeline (Jenkins, MSTest): 40% less deployment time, 95% fewer production bugs, weekly releases instead of quarterly.
- **Customer-facing delivery:** Shipped C++/.NET metrology applications, tuned SQL Server HA clusters for 30% better query performance, and deployed on-site at customers in Korea, Japan and Singapore.
- **Knowledge transfer:** Mentored 4 new joiners; ran the weekly "Tech Junction" talks for roughly 80 staff.

KLA Corporation

Chennai, India

Software Engineering Intern

2019 - 2021

- **Legacy to web:** Built a ReactJS web platform over a C# REST API and MSSQL replacing a legacy Windows system; 500+ users, 25% lower maintenance cost.

AI PROJECTS

- **Agent Goal (Goal Genie):** React Native app; a Supabase Edge Function drives Gemini 2.5 Flash with an engineered SMART-goal prompt and context caching.
- **Agent Notes:** C++ app pairing real-time whisper.cpp transcription with a local Qwen 2.5 model (llama.cpp server) for structured summaries.
- **Project5K:** Python Discord bot (Firestore, APScheduler, Google Calendar API) with local-LLM coaching via llama-cpp-python and a Gemini API variant.

EDUCATION

Concordia University

Montreal, QC

Master of Applied Computer Science (Co-op); GPA 4.03/4.30

Jan 2025 - Dec 2026 (expected)

PSG College of Technology

Coimbatore, India

M.Sc. (Integrated), Software Systems; CGPA 8.55/10, First Class

2016 - 2021
